

Dr. Mohammed Al-Sarawi

General Director, STATE OF KUWAIT
ENVIRONMENT Public Authority

We have to focus on:
Technology to capture CO₂ and other (SO_x, NO_x)
The State of Kuwait work along with other
(OPEC & AOAPEC) and G77+China to reduce CO₂ emissions by
adopting technology that reduced the amount of CO₂
in the atmosphere by adopting Zero emission
standard policy ^{in all power and refinery utilities}. In a yearly basis Studies
Kuwait doing (Inventory study) to reduce
the emission. Kuwait also developed
an (Arab Fund and Kuwait fund for
social and economic development), both
fund are spending millions of dollars yearly
in order to reduce the level of Poverty
and health problems and support projects in
the non and least developed countries. The
major technology transfer in Kuwait oil
sector is to build many units related
to Tail gas collection systems and
emissions controlled systems. In conclusion we
should cooperate more and rise fund to adopt technology
that capture CO₂. Fossil fuel countries are
willing to cooperate to achieve sustainability.
